

Master Data Management Implementation

Estimated Time

- 6 Weeks

Our Informatica consultants have the experience and training to implement Informatica MDM faster and with better business harmonization than in-house initiatives.

Our team will take the time to create a personalized implementation plan, atuned to your business objectives. We will document the project's technical requirements,

Why PDI?

- We use the Informatica-approved velocity methodology.
- Our Informatica-certified experts have extensive experience with integration projects.

assist your team in understanding the domain capabilities, and help install MDM in your development environment.

We will also create a staffing plan to support the effective implementation of MDM in your environment, ensuring the project runs smoothly and is delivered on time.

Benefits Include:

- A detailed plan, laying out the design, development, test, and deploy phases of the implementation process
- Complete project staffing
- Mapping requirements definition to product functionality and features
- Development of a high-level architectural map, laying out how MDM and DQ will integrate with the client's environment
- Determination of all capacity requirements for the infrastructure of the client's production environment
- Installation of the Informatica Master Data Management (MDM) Hub and Informatica Data Quality
- Validated Development Environment
- Identification and profiling of up to 5 data sources
- Identification of data cleansing and matching needs
