

# B2B Data Exchange Infrastructure

## Estimated Time

- 9 Weeks

A typical Data Exchange solution includes data translations, file transfers between various systems and applications, alerts, and more. With so many tasks and pieces, it is imperative that a strong infrastructure exists.

This infrastructure must not only support a company's current needs; it must also have the capacity and scalability to support future needs as well.

## Why PDI?

- We use the Informatica-approved velocity methodology.
- Our Informatica-certified technicians have extensive experience with Informatica products and various data types (EDI, etc.).

Our B2B Data Exchange Infrastructure is ideal for customers searching for someone to guide them through the stages of B2B Data Exchange installation.

Our experts will create a clear road map before we begin, with the final result being a highly functional product implementation coupled with detailed documentation.

The B2B Data Exchange Infrastructure package establishes the foundation needed for your organization to kick-start its trading partner initiatives. We typically focus on one trading partner with 2-3 data format conversions. At the end of this engagement you will be confident your organization has a functioning integration between you and the trading partner of focus.

Our team will enable your organization to build on this foundation by providing detailed operations documentation and leveraging the use of mapping templates (mapplets) that can be reused as additional document types and trading partners are on-boarded.

## Contact PDI

For more details about Pacific Data Integrators contact us at [informatica@pacificdataintegrators.com](mailto:informatica@pacificdataintegrators.com) or visit our website at [pacificdataintegrators.com](http://pacificdataintegrators.com).

## Standard B2B DX Infrastructure Implementations Include:

- Documentation of the short- and long-term requirements of the data exchange infrastructure
- B2B Data Exchange installation support (may include PowerCenter and B2B Data Transformation, depending on the project)
- B2B Data Exchange configuration support
- Support during beta testing
- Detailed knowledge transfer and enablement of team to become self-sufficient and build-out future requirements
