

Architecture Assessment - Cloud Hybrid

Estimated Time

- 1 - 2 Weeks

As cloud becomes more powerful and more common, the importance of effective integration between on-premise and cloud applications grows.

Organizations commonly implement cloud integrations on a case-by-case basis. This creates a patchwork of integration and connections that become more complicated over time.

Why PDI?

- We use the Informatica-approved velocity methodology.
- Our Informatica-certified technicians have extensive experience with Informatica products.

As cloud becomes more common, companies realize the need for a comprehensive integration platform, rather than one-off integration fixes.

This is why Pacific Data Integrators now offers our Cloud Hybrid Architecture Assessment.

We will provide a comprehensive assessment of your current environment that includes future-state initiatives and considerations. This will allow us to review your company's integration needs and understand the inner workings of the challenges you face.

At the end of this architectural assessment, Pacific Data Integrators will present you with a step-by-step road map for improving your hybrid cloud system. We will explain changes that could improve efficiency, reduce costs, and increase the quality of your data integration.

This week-long assessment includes examination of current processes, an outline the client's current systems, and recommendations for system improvements. At the end of this project, your company will have a comprehensive report outlining steps to create an effective hybrid cloud architecture.

Contact PDI

For more details about Pacific Data Integrators contact us at informatica@pacificdataintegrators.com or visit our website at pacificdataintegrators.com.

Benefits Include:

- Review and outline of the client's existing data integration landscape.
- Assessment of the client's integration architecture.
- Report of cloud-based solutions to fit the client's integration needs.
- Presentation of a hybrid architecture road map, including an outline of steps to create a robust, efficient hybrid architecture.
- Recommendations of any additional products that would improve the client's technology stack.
- Discovery of areas where costs can be reduced.
- Pacific Data Integrators will also outline future integration needs and challenges the client may face as they continue to evolve and grow.
